The laboratory grown diamond described in this Report (Report) has been graded, tested, analyzed, examined and/or inscribed by International Gemological Institute (I.G.I.). A laboratory grown diamond is one that has essentially the same chemical, physical and optical properties as a mined diamond, with the exception of being grown by man (a particular product). This is a manufactured (man-made) allomand produced by CVD (chemical vapor deposition) or by HPHT (high pressure high temperature) growth processes and may include port-growth freatments to after the color. (GL employs and utilizes those techniques and equipment currently available to IG.I. including, without limitation, 10X magnification, corrected triplet loupe, binocular microscope, master color comparison stones, non-conflact-optical measuring device. Spectophotometer and such other instruments and/or processes as deemed appropriate by IG.I. in the case where alamond melee is set in a mounting, a random testing procedure, regarding the alamonds being of natural of laboratory created origin will be performed. This Report includes advanced security features A duly accredited gemologist of jeweler can advise you with respect to the importance of and interrelationship between cut, color, clarity and card weight.
