KEY TO SYMBOLS

Red symbols indicate internal characteristics. Green symbols indicate external characteristics.

The laboratory grown diamond described in this Report (Report) has been graded, tested, analyzed, examined and/or inscribed by International Gemological Institute (IGL): A laboratory grown diamond is one that has essentially the same chemical, physical and optical properties as a mined diamond, with the exception of being grown by man (a manufactured product). This is a manufactured (man-made) diamond produced by CVD (chemical vapor deposition) or by HPHT (high pressure high temperature) growth processes and may include past-growth treatments to alter the color. IGL employs and utilizes those techniques and equipment currently available to IGL, including, without limitation, 10X magnification, corrected triplet loupe, binocular microscope, matter color comparison stones, non-contact-optical measuring device. Spectaphotometer and such other instruments and/or processes a deemed appropriate by IGL In the case where diamond melee is set in a mounting, a random testing procedure, regarding the diamonds being of natural of laboratory created arigin will be performed. This Report includes advanced security features A duly accredited gemologist or jeweller can advise you with respect to the importance of and interrelationship between cut, color, clarity and carat weight.
