The laboratory grown diamond described in this Report (Report) has been graded, tested, analyzed, examined and/or inscribed by International Gemological Institute (IGLI). A laboratory grown diamond is one that has essentially the same chemical, physical and optical properties as a mined diamond, with the exception of being grown by man (a manufactured product). This is a manufactured (man-made) diamond produced by CVD (chemical vapor deposition) or by HPHT (high pressure high temperature) growth interactions to alter the color. [GL employs and utilizes those techniques and equipment currently available to IGL including, without limitation, IDX manufacture or constant total to an behavior missing and the same schemic or comparison. magnification, corrected triplet louge, binocular microscope, master non-contract-optical measuring device, Speatraphotometer and such other instruments and/or processes as deemed appropriate by IGL in the case where diamond melles is set in a mounting, a random testing procedure, regarding the diamonds being of natural of laboratory created origin will be performed.
