The laboratory grown diamond described in this Report (Report) has been graded, tested, analyzed examined and/or inscribed by International Gemological Institute (IGLI). A laboratory grown diamond is one that has essentially the same chemical physical and optical properties as a mined diamond, with the exception of being grown by man (a monufactured produce). This is a manufactured (manimade) diamond produced by CVD (chemical vopor deposition) or by IRPHT (high pressure high temperature) growth processes and may include post-growth treatment to diter the color. IGLI employs and utilizes those techniques and equipment currently available to IGLI, including, without limitation, IDX magnification, corrected triplet laups, binocular microscope, marter color comparison stones, non-contact-optical measuring device. Spectraphotometer and such other instruments and/or processes as deemed appropriate by IGLI in the case where diamond melee is set in a mounting, a random testing procedure, regarding the diamonds being of natural of laboratory credited origin will be performed. This Report includes advanced security features A duly accredited gemologist or jeweler can advise you with respect to the importance of and interrelationship between cut., color, calinty and cardi weight.
