The laboratory grown diamond described in this Report (Report) has been graded, tested, analyzed, examined and/or inscribed by international Gemological institute (I.G.I.). A laboratory grown diamond is one that has essentially the same chemical physical and optical properties as a mined diamond, with the exception of being grown by mon (a manufactured product). This is a manufactured (man-made) diamond produced by CVD (chemical vapor deposition) or by HPHT (high pressure high temperature) growth processes and may include post-growth treatments to after the color. IGL employs and utilizes those techniques and equipment currently available to IGL, including, without limitation, 10X magnification, corrected triplet lauge, binocular microscope, master color comparison stones, non-contact-optical measuing device, Spectraphotometer and such other instruments and/or processes a deemed appropriate by IGL in the case where diamond being of natural of laboratory created origin will be performed. This Report includes advanced security features A duly accelted generatory and universe and work work respect to the importance of and interrelationaries function and work work work work work to be the importance of and interrelationaries functions and on the case to the construct of the construct to the construct of and interrelation work with the performed and the respect to the importance of and interrelation works with the assessite of the CHECHME
