The laboratory grown diamond described in this Report (Report) has been graded, tested, analyzed, examined and/or inscribed by International Gemological Institute (1.G.I.). A laboratory grown diamond is one that has essentially the same chemical, physical and Idobaticity grown administration of the initial indice essentiality time soline creating produce and optical properties as a minited admands with the exception of being grown by man (a manufactured product). This is a manufactured (man-made) adamond produced by CVD (chemical vepor deposition) or by HPH (high pressure high temperature) growth processes (chemical vapor deposition) or by HPHT (high pressure high temperature) growth processes and may include postgrowth treatments to after the colar. (GL employ and utilizes those techniques and equipment currently available to (GL, including, without limitation, 10% magnification, corrected triplet loupe, binocular microscope, master color comparison stones, non-contact-optical measuring device. Spectraphotometer and such other instruments and/or processes as deemed appropriate by (GL in the case where diamond melee is set in a mounting, a random testing procedule, regarding the diamonds being of natural of laboratory created origin will be performed. This Report includes advanced security features A duly accellated geneticity and card weight.
