The laboratory grown diamond described in this Report (Report) has been graded, tested, analyzed, semined and/or inscribed by International Gemological Institute (I.G.I.). A laboratory grown diamond is one that has essentially the same chemical, physical and optical progeneties as a mined diamond with the exception of being grown by man (a manufactured product). This is a manufactured (man-mode) alamond produced by CVD (chemical vapor deposition) or by IHPI (high pressure high temperature) growth processes and may include party-provide the test of the same state of the same state techniques and equipment currently available to IGL, including, without limitation, 10X magnification, connected tiplet loupe, binocular microscope, master color compation stones and/or processes as deemed appropriate by IGL in the case where diamond meles is set in a mounting, a created origin will be performed. This Report Includes divanced security features A duly accreated origin will be performed. This Report Includes divanced security features and interrelationship between cut, color, carity and carat vegint.
