The laboratory grown diamond described in this Report (Report) has been graded, tested, analyzed, examined and/or inscribed by International Gemological Institute (IGLI). A laboratory grown diamond is one that has essentially the same chemical physical and optical properties as a mined diamond, with the exception of being grown by man (a manufactured product). This is a manufactured (man-made) diamond produced by CVD (chemical vapor deposition) or by HPHT (high pressure high temperature) growth processes and may include pod-growth treatments to after the color. IGLI employs and utilizes those techniques and equipment currently available to IGLI, including, without limitation, IDX magnification, connected triplet loupe, bino-cular microscope, master color comparison stones, non-contact-optical measuring devices. Spectraphotometer and such other instruments and/or processes as deemed appropriate by IGLI in the case where diamond molece is set in a mounting, a random testing procedure, regarding the diamonds being of natural of laboratory created origin will be performed. This Report includes advanced security features A duly accredited gemologist or jeweler can advise you with respect to the importance of and interesticinship between cut, color, claimly and cardin weight.
