KEY TO SYMBOLS

Red symbols indicate internal characteristics. Green symbols indicate external characteristics.

The laboratory grown diamond described in this Report (Report) has been graded, tested, analyzed, examined and/or inscribed by International Gemelogical Institute (IGLI). A laboratory grown diamond is one that has essentially the same chemical, physical and optical properties as a mined diamond, with the exception of being grown by man (a manufactured product). This is a manufactured (man-made) diamond produced by CVD (chemical vapor deposition) or by IHPHT (high pressure high temperature) growth processes and may include post-growth retartents to after the color. IGL employs and utilizes those techniques and equipment currently available to IGL, including, without limitation, IDX magnification, corrected triplet loupe, binocular microscope, marter color comparison stones, non-contact-optical measuring device. Spectrophotometer and such other instruments and/or processes as deemed appropriate by IGL in the case where diamond melee is set in a mounting, a random festing procedure, regarding the diamonds being of natural of laboratory created origin will be performed. This Report includes advanced security features A duly accredited gemologist or jeweler can advise you with respect to the importance of and interrelationship between cut, color, clarity and acrard weight.
